

Smart Farmer-IOT Enabled Smart Farming Application

IBM NALAIYATHIRAN

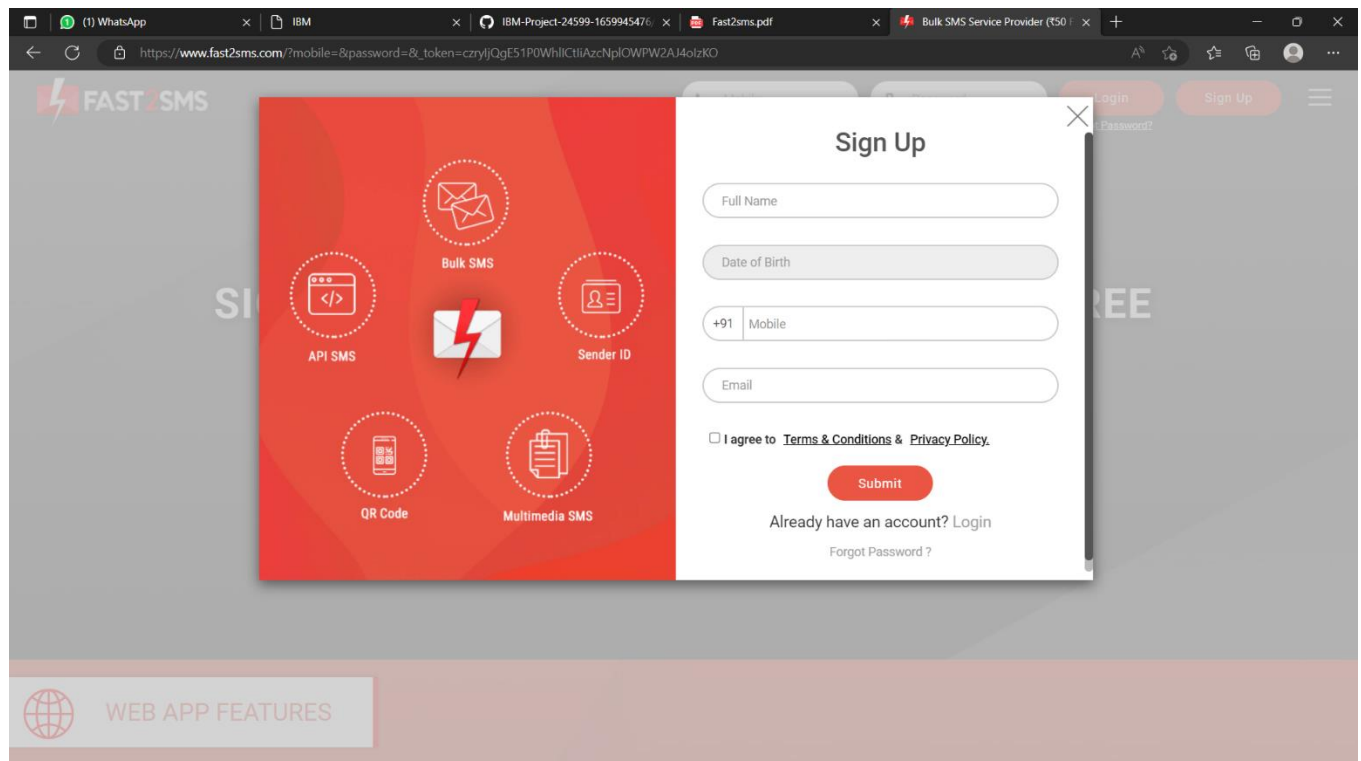

SPRINT PHASE 3

TEAMID: PNT2022TMID03145

5.4 Configuration of Node-Red to send commands to IBM cloud

ibmiot out node I used to send data from Node-Red to IBM Watson device. So, after adding it to the flow we need to configure it with credentials of our Watson device.

Here we add two buttons in UI

1 -> for water on

2 -> for water off

We used a function node to analyse the data received and assign command to each number.

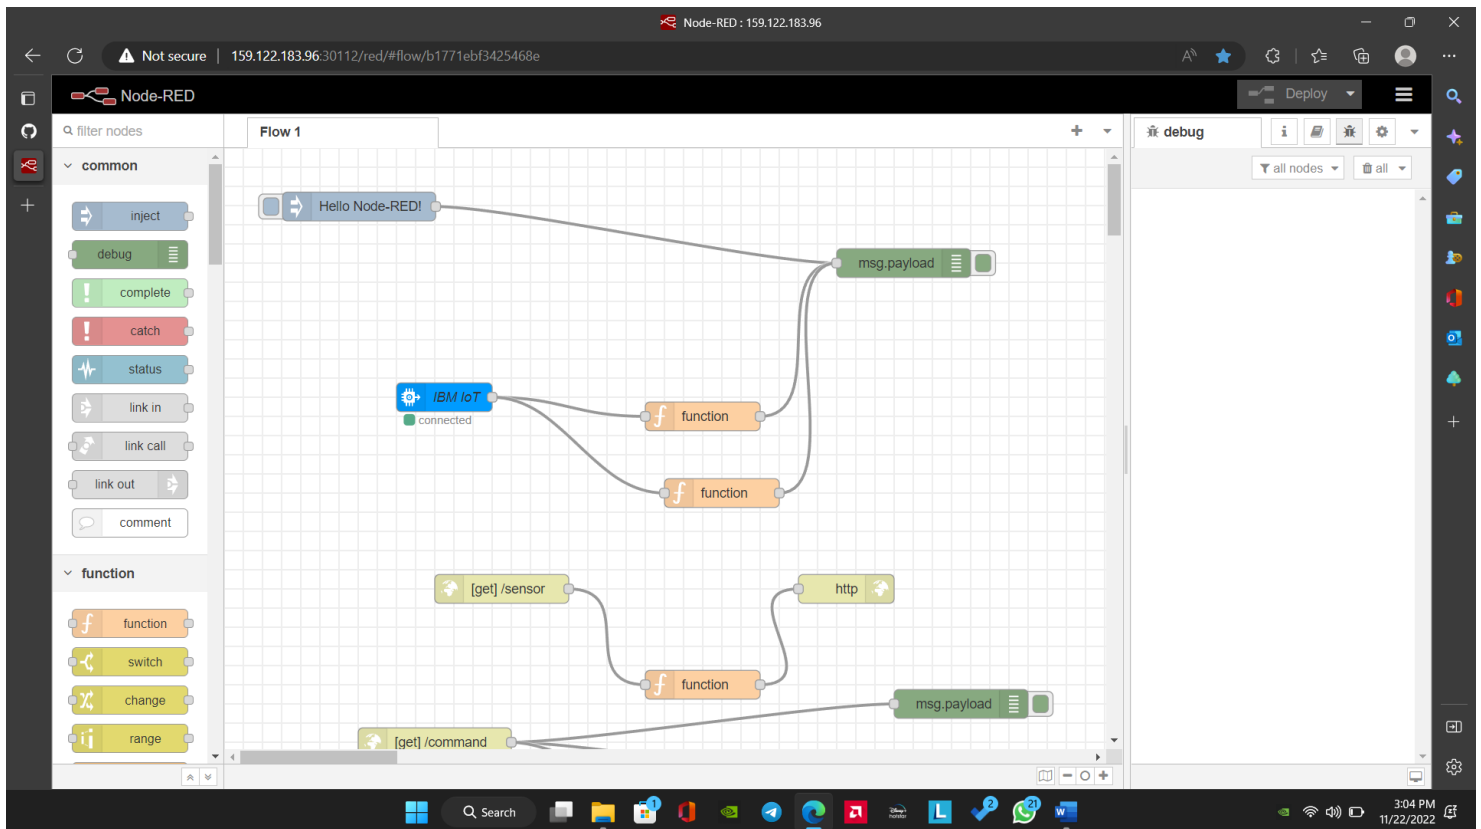

The Java script code for the analyses is:

```
if(msg.payload===1)
```

```
msg.payload={"command": "ON"};
```

```
else if(msg.payload===0)
```

```
msg.payload={"command": "OFF"};
```

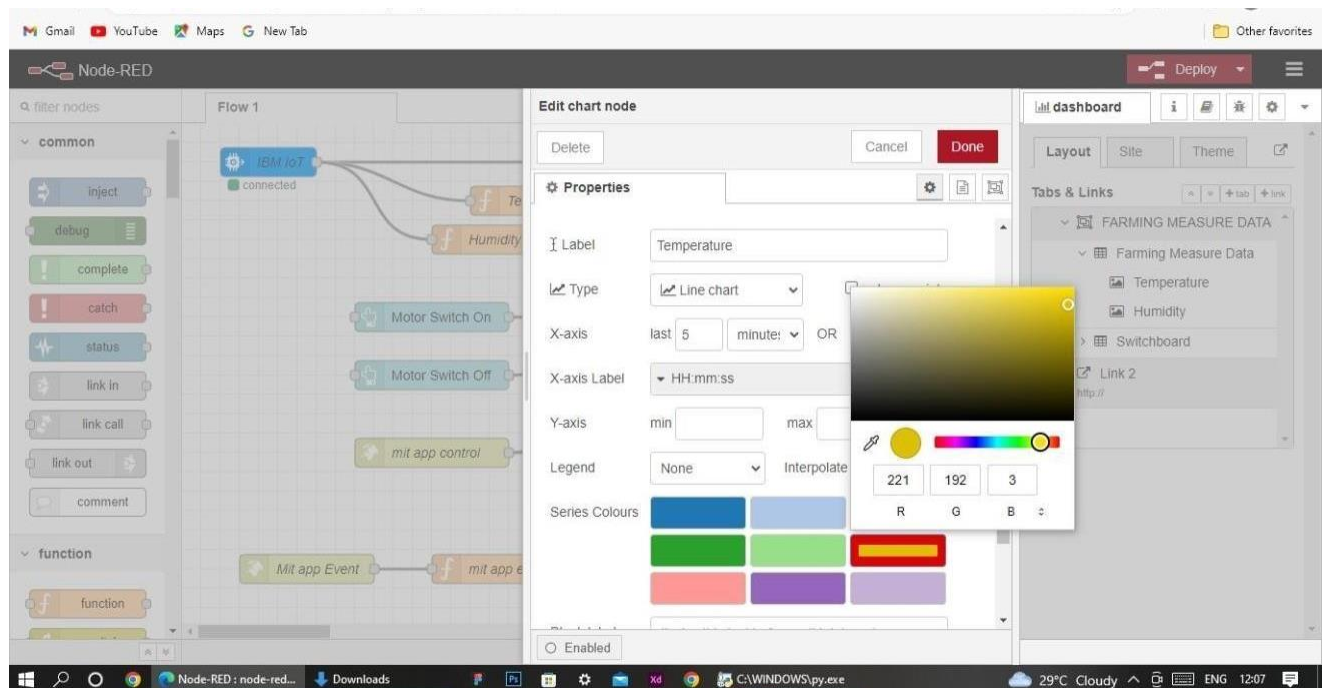

This is the program flow for sending commands to IBM cloud.

5.5 Adjusting User Interface

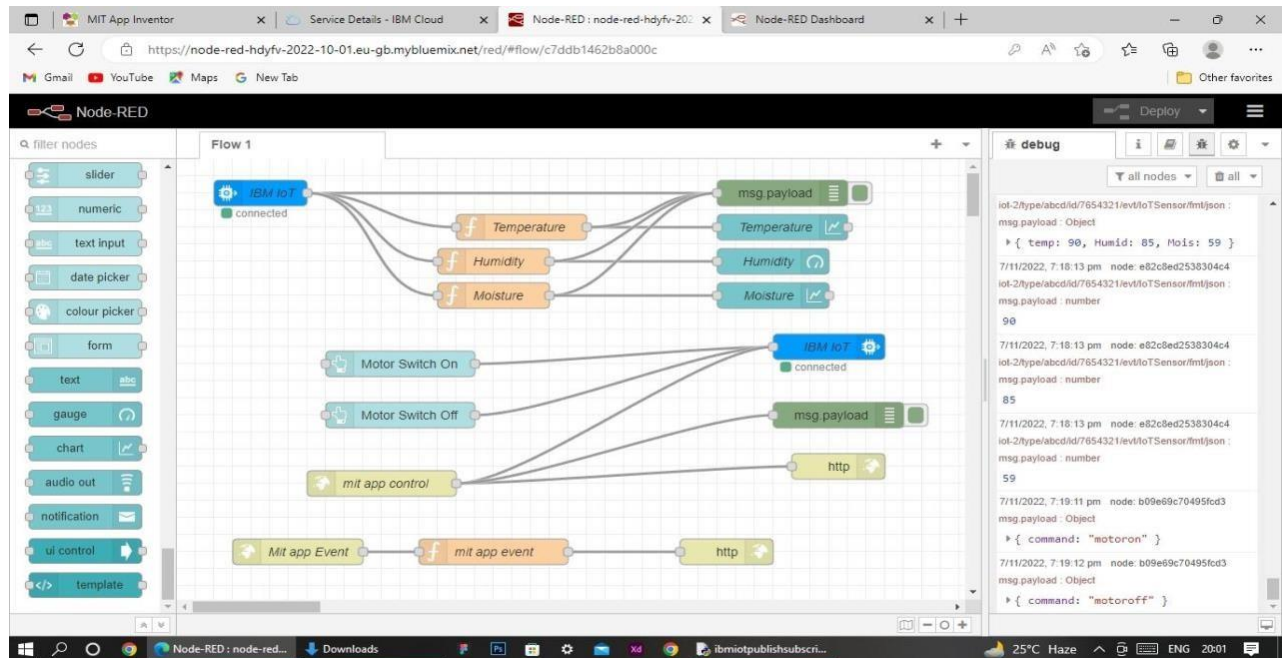

In order to display the parsed JSON data a Node-Red dashboard is created

Here we are using Gauges, text and button nodes to display in the UI and helps to monitor the parameters and control the farm equipment.

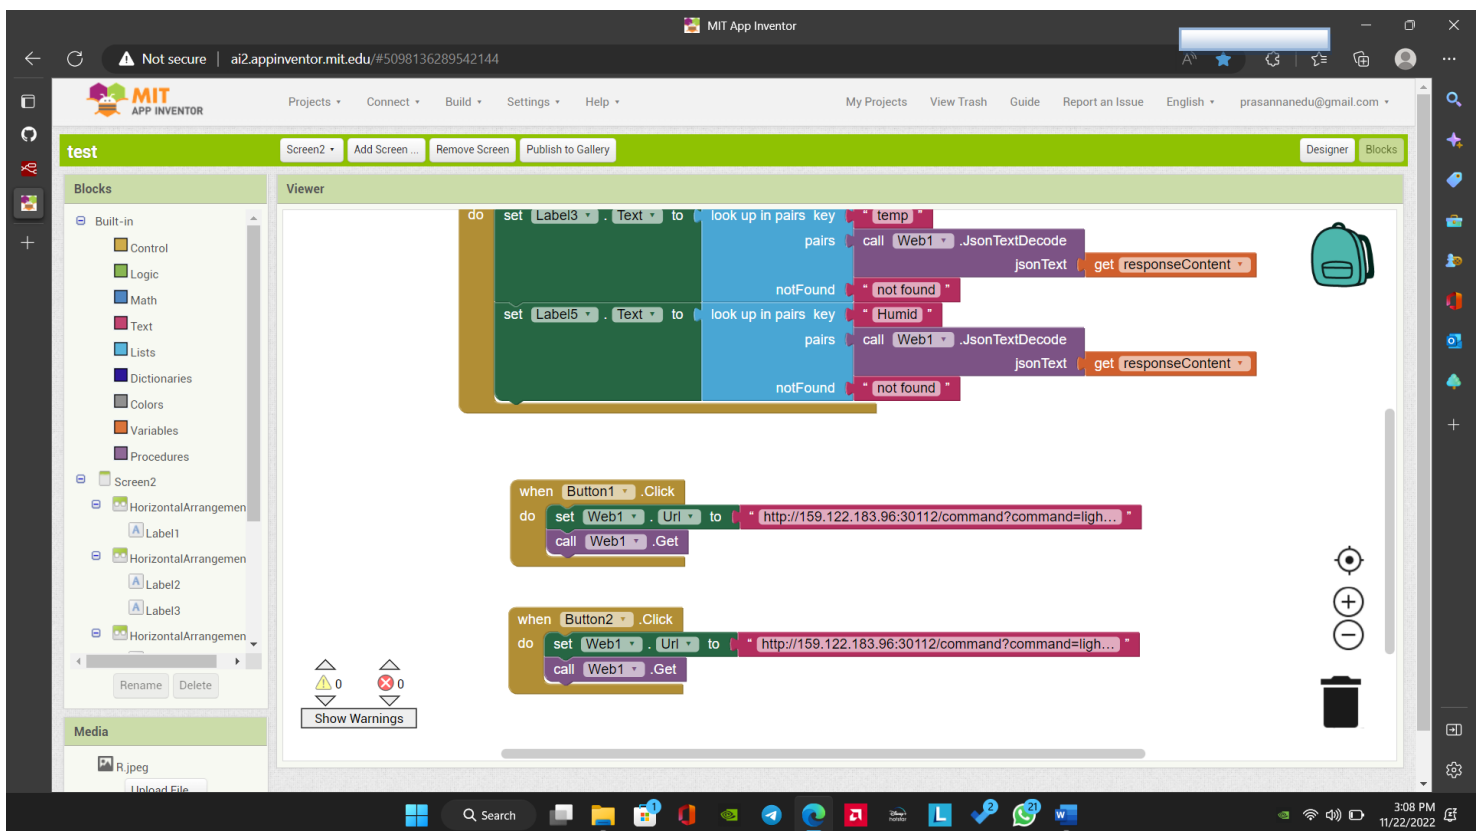

Below images are the Gauge, text and button node configurations.
